

Climate Change and Science Denialism

This worksheet should be completed in preparation for class discussion (5 points)

1. Reading Notes on climate change (the facts). Briefly:

a) Create a working definition of climate change.

b) Describe the causes of climate change.

c) Describe the potential effects of climate change.

2. Reading Notes on article you were assigned to read:

Write down some brief responses to the following questions:

a) How has global climate change affected the local climate and geography of the region discussed in your article?

- b) How have these changes affected the people living there?
- c) How have the people tried to adapt to climate change's effects?
- d) All of these articles include images which were selected to have an impact on the reader. What do these images show? Which image is the most powerful? Describe it and discuss what makes it an effective image.
- e) Why is this story important for the world to know?
