

Epidemics in History Discussion

Forum Instructions

Each student must post (1) substantial initial post at minimum of **250 words** per topic by **Tuesday**. Your initial post must contain **at least (2) scholarly articles from the Virtual Library properly cited in the current APA format**. Also, remember to use APA style formatting for in-text citations at the end of paraphrased sentences and direct quotes as well. Then, reply to **at least (2) of your classmates' initial posts by Thursday**. Each reply post should be a **minimum of 110 words per reply**. All replies in the discussion forum should enhance the discussion. Non-informative messages posted in the discussion forum will not be counted towards the required number of posts. *Late discussion posts are not accepted in this course.

Discussion Topic

Describe one of the worst infectious disease outbreaks in history. Identify the causative microorganism. Using the resources available on the Internet, describe in detail how this organism would be identified in a modern laboratory today. Please specify the type of specimen to be studied and the exact tests that would be used for preliminary and final identification. Please describe the appropriate treatments that are available today.
