## HTML5 and JavaScript Component Presentation

**Introduction:** Later in this class we will be developing a user interface using HTML5 and JavaScript. We need to start becoming familiar with how HTML5 and JavaScript work.

The assignment to build a user interface is later in the course. But we can use this time to become familiar with building screens in HTML5 and JavaScript. Let's help each other learn how to use the components by each one of us taking a component, research it and give a presentation on it.

**Instructions:** Select a HTML5 or JavaScript commands or tag. In this assignment you need to investigate what are some of the most common commands and tags. A presentation can be made up of any of the following formats or combinations of formats:

- Power Point
- Video
- Screen Cast
- Audio

If given in a classroom setting the presentations would be about 5 to 10 minutes each. That should give you an idea of how much content should be in the presentations. Your presentations should cover:

- The purpose of the component. What is it used for?
- What are the **common** properties and methods for the component? Don't tell us about all of the properties and methods; many of them are advanced. We don't have time to learn every property and method.
- Include some simple coding examples if possible. Make them small.
- Any alternate uses for the component.

There are many resources available for learning about HTML5 and JavaScript commands and tags.

When you are finished with your presentation you will post it in an assigned discussion thread. Please monitor the thread and respond to questions and comments.

### **Rubric:**

Your presentation will be graded on the following areas:

1. Correct spelling, grammar and punctuation. (20%)
2. Accuracy of the content. (20%)
3. Content presented clearly and appropriate level for the audience. (20%)
4. Presentation interesting and holds the audience's attention. (20%)
5. Correct areas of the topic are covered. (20%)
