

Research Literature Review

Arnica montana is arguably the most widely used and well known homeopathic remedy. You are asked to review the evidence base for its use within a clinical setting. You should attempt to identify the following:

- (i) Observational studies, (including any case studies and / or series of case studies)
- (ii) Randomised controlled trials
- (iii) Systematic reviews

Determine the type of evidence each trial provides and consider which aspect of 'homeopathy' has been reported. Summarise the evidence relating to Arnica, assessing the contribution each makes to the evidence base.

You must reference in full (Bournemouth Harvard style). Tables and diagrams may be used where relevant

Assignment Reminders

Put your Student Number at the top of each page
Number each page at the bottom
Put a word count at the bottom of your assignment
Put complete reference list at the end of your assignment (reference words are not to be used as part of word count)

WORD LIMIT: 2000 words (+/- 10%)
