CREATING A HYPOTHESIS WORKSHEET Group #: 1

Kalika, Grishma Banjade, Hien Nguven, Dolmaya Mainali

Members: Shivatmika

Example

1. List a **Dependent Variables** (DV) of interest to your group, with three dimensions for each. DVs are the areas you are interested in like attitudes about online learning, attitudes about dating, etc. Dimensions are just making more specific statements.

Attitudes about Remote Working	1. 1. Attitudes about productivity levels in office vs home
(Work from home)	2. 2. Attitudes about Job Satisfaction (in office vs home)
	3. Attitudes about accountability of home workers

2. Using the dependent variables from above. List *at least six independent variables (IVs)* that could be associated with that dependent variable. (IV – are items like age, income, major, etc.)

1. Age
2. Type of work (IT, Accounting, Hospitality, etc)
3. Residence (city versus rural)
4. Income Level
5. Gender
6. Political Affiliation

3. For your selected dependent variable, **write three conceptual hypotheses** (independent variable affects a dimension of the dependent variable). Example: Age affects attitudes about online learning.

1. Age affects attitudes about job satisfaction
2. Type of work affects attitudes about productivity levels
3. Residence affects attitudes about job satisfaction

4. List an **indicator** for the three independent variables you used in #3 above.
