## April's Class

Kwesi Christian

Here are the questions I would like you to answer for all of these.

1- what is the function of the application

2- what is the problem it is looking to solve?

3- what are its strengths

4- what are its weaknesses?

5- what could it improve on?

6- what demographic uses it the most?

7- is it popular? ( this can be determined by the reviews or the number of stars it's given.)

8- who developed it?

9- how many updates has it revived?

10- is it still being kept up to date
