Ethical Dilemma: Cash Sales

You and four others are the “bar team” in a bar. Everyone works very well together—so well that you all split tips and divide them equally at the end of each shift. However, management has voiced concerns about the bar team’s tips being too high. You know that part of that is because you are “bar heavy” when mixing drinks, but that does increase the costs. A couple of weeks ago you noticed Nathan and noticed that he didn’t seem to be putting cash sales into the cash register. It appeared that he was putting the cash into the bar team tip box. You talked with another team member Jamie about this, and you started paying more attention to what Nathan was doing. You have come to the conclusion that Nathan is not putting in all of his cash sales, but you have no real proof.
